PROFILE

I teach networking, information security, and operating systems at the tertiary level, and I came to it after six years of working in the field rather than straight out of school. That background shapes how I teach: I start with a demonstration or a lab, then work back to the theory, because most of my students meet these concepts for the first time in my classroom. I prepare my own course materials, including the semester programs, laboratory manuals, and examinations, and I teach in both English and Tagalog so that no student is left behind by language. I hold a CompTIA A+ certification, I am preparing for CompTIA Network+, and I am currently taking my Master of Science in Information Technology at the Polytechnic University of the Philippines.

EDUCATIONAL BACKGROUND

Master of Science in Information Technology

Polytechnic University of the Philippines (*enrolled, in progress, 2026 to present*)

Bachelor of Science in Information Technology

Bulacan State University, Bustos Campus (*2019*)

TEACHING EXPERIENCE

Part-Time Instructor, ACLC College of Baliuag, Bulacan July 2026 to present

I handle four tertiary IT subjects under the Bachelor of Science in Information Technology program:

- Data Communications and Networking 1 (DCN1)
- Data Communications and Networking 3 (DCN3)
- Information Assurance and Security 2 (IAS2)
- Principles of Operating Systems and its Applications (POSA)

I prepared the complete course package for each subject, covering the semester program, the laboratory manual, and all four major examinations, following the institutional LMS and the prescribed BSIT curriculum outcomes. Networking subjects are delivered through Cisco Packet Tracer laboratories and Cisco Networking Academy material, covering routing and switching, VLANs, spanning tree, EtherChannel, and dynamic routing protocols. Security topics are taught through live demonstrations rather than lectures alone. My sections are mixed in ability, so I lecture bilingually and keep assessment transparent to the students.

Technical Training and Knowledge Transfer, Asalus Corporation (Intellicare) and Smart Communications 2020 to 2026

I conducted onboarding and systems training for IT staff and non-technical end-users, and wrote the step-by-step documentation and standard operating procedures they worked from.

PROFESSIONAL EXPERIENCE

Information Technology Support, Asalus Corporation (Intellicare) April 2023 to May 2026

- Attended to daily hardware and software incidents on Windows and Linux workstations, averaging more than a hundred and fifty tickets a month, with most resolved on first contact.
- Deployed and configured workstations to the company security baseline, and administered Active Directory accounts, group policy, and user access.
- Took part in three operating system and software migrations, including the accompanying hardware refresh.

Operational Analyst, Smart Communications, Inc. June 2020 to April 2023

- Monitored high-availability platforms on a twenty-four hour rotation and handled critical escalations within the prescribed service levels.
- Coordinated the transfer of ISP circuits, surveillance, and biometric systems during an office relocation, completed without service interruption.

Network Systems Administration (On-the-Job Training), Philippine Long Distance Telephone Company (PLDT) 2019

CERTIFICATIONS

CompTIA Network+ (N10-009) *in preparation, target 2026*

CompTIA A+ (2025)

Microsoft Certified: Azure Fundamentals (AZ-900) (2024)

Google Cybersecurity Professional Certificate (2023)

Oracle Cloud Infrastructure Foundations (2023)

SUBJECTS PREPARED TO TEACH

Networking. Data Communications and Networking 1 to 3, networking fundamentals, the OSI model, TCP/IP, subnetting and VLSM, routing and switching, and CompTIA Network+ topics, with Cisco Packet Tracer laboratory work.

Information Security. Information Assurance and Security 1 and 2, cybersecurity fundamentals, the CIA triad and data classification, and baseline configuration and compliance.

Systems. Principles of Operating Systems and its Applications, Windows client and server administration, and Linux command line fundamentals.

Hardware and Servicing. Computer assembly and troubleshooting, operating system installation, and computer systems servicing at the CompTIA A+ level.

Introductory Programming. Programming fundamentals and logic using C, C++, C#, Java, and PHP, with database basics in SQL.

TECHNICAL PROFICIENCIES

Networking. TCP/IP, DNS, DHCP, VPN, router and switch configuration, VLANs, LAN and WAN troubleshooting, Cisco Packet Tracer, Wireshark, PuTTY.

Systems and Operating Systems. Windows 10 and 11, Windows Server, Linux command line, Active Directory and group policy, ServiceNow, OSTicket.

Security Tools. Trellix, McAfee, security baseline compliance, TeamViewer, AnyDesk.

Programming. C, C++, C#, Java, PHP at an introductory level, and SQL.

Instructional. LMS course authoring, laboratory manual and examination design, Cisco Networking Academy materials, Microsoft Office and Google Workspace, video production and editing.

OTHER PROFESSIONAL ACTIVITY

Sir Vantes, *Tagalog-language IT education channel, YouTube and TikTok (2026 to present)*

I produce free instructional content in Tagalog on IT certification and careers, which has reached roughly nine hundred thousand views and an audience of over six thousand followers. I also maintain joshuacervantes.online, which hosts a free CompTIA Network+ practice examination trainer used by self-study learners.
